

US Virtual Guard

*24/7 Live Remote Security
Guards Protecting Your
Community And Business*

**All photos in this brochure are of the actual USVG command center*

Our Story

Over the last few years a surge of violence and insecurity shook communities across the United States. In the wake of these events, many institutions urgently sought to upgrade their security—but faced a major hurdle: the high cost of traditional protection.

For our founder, the rising threats and clear weaknesses in conventional security systems demanded action. The mission was clear: develop a powerful and affordable security solution that didn't compromise on effectiveness.

That mission became US Virtual Guard (USVG), A modern security company blending human expertise with AI-powered surveillance to deliver real-time, remote monitoring. With highly trained remote guards and smart technology, USVG offers round-the-clock security that's proactive, scalable, and efficient.

USVG provides unparalleled security for: Schools, Houses of Worship, Luxury Homes, Commercial Properties and more.....

Our mission is simple: to help protect people and the assets they've worked hard to build—safely, intelligently, and affordably.

Apartment Buildings

Apartment Buildings Are a Growing Target

In 2023, more than **1 in 10 burglaries** occurred in apartment complexes—targeting shared spaces, mailrooms, and unsecured access points.

Many buildings rely on outdated systems or overworked staff, leaving residents vulnerable and property at risk.

Apartment Buildings Require Smarter Security

US Virtual Guard provides a cost-effective, high-tech solution for residential communities. From lobbies to parking lots, our live remote monitoring deters intruders, vandalism, and unauthorized access—before issues arise.

What sets us apart

Our trained guards monitor your cameras live, 24/7—not after the fact. We respond to threats in real time, using voice intervention or alerting onsite staff and authorities. We integrate with existing systems for seamless coverage.

With US Virtual Guard, residents feel safer, property damage is reduced, and management gains peace of mind.

Office Buildings

Smarter Security for Office Buildings

Office buildings are high-traffic, high-responsibility spaces—often with large teams of staff, visitors, and onsite security personnel. But even the best security guard on the ground can't be everywhere at once.

The reality is, most on-site guards have limited visibility. They patrol or sit at fixed posts, and like any human, they can get distracted, fatigued, or miss something happening just out of view. Cameras may be installed, but if no one is actively watching them, they serve only as a record—not a deterrent.

US Virtual Guard changes that.

Reduce payroll. Increase coverage.

Our trained live remote guards actively monitor multiple camera feeds in real time, offering full situational awareness across every critical area: lobbies, parking garages, stairwells, loading docks, and more. We can enhance your existing security team by serving as an extra set of eyes, or replace some or all of your physical guards, cutting unnecessary payroll costs while boosting performance and coverage.

Whether it's catching unauthorized access, preventing property damage, or ensuring after-hours safety, our system delivers real-time response at a fraction of the cost of traditional guards.

Warehouses

Warehouses Are a Growing Target

In 2023, cargo theft incidents in the U.S. rose by **26%**, with losses exceeding **\$445 million**, much of it stolen from warehouses and distribution centers.

Valuable inventory, open layouts, and minimal after-hours staffing create ideal conditions for targeted crime.

Warehouses Require Smarter Security

US Virtual Guard delivers intelligent surveillance for industrial facilities. Our live remote guards monitor vulnerable zones in real time—detecting threats before loss or disruption occurs.

What sets us apart

We go beyond alarms—our trained professionals actively watch your cameras 24/7. They assess threats instantly and respond with voice deterrents or direct alerts. We integrate seamlessly with your existing infrastructure.

With US Virtual Guard, your operations stay secure, assets stay protected, and downtime stays minimal.

****See our website for additional industries we serve***

Government Buildings *Are a Growing Target*

In 2023, threats against U.S. government officials and facilities more than **doubled since 2021**, with over **450 targeted** incidents reported!

Smaller municipalities face rising risks with limited resources, making cost-effective protection more critical than ever.

Government Buildings Require Smarter Security

US Virtual Guard offers an affordable, high-tech security solution tailored for local governments. From public works sites to administrative offices, our live remote monitoring deters threats before they escalate.

What sets us apart

Our trained professionals monitor camera feeds in real time—24/7. Unlike passive systems, we respond instantly to threats, using voice deterrents or alerting authorities when needed. We seamlessly integrate with your existing infrastructure.

With US Virtual Guard, government buildings stay protected, staff feel safer, and operations remain uninterrupted

Car Dealerships *And Parking Lots*

Car Dealerships Are a Growing Target

In 2023, vehicle thefts in the U.S. surged past **1 million incidents**, with dealerships and lots hit hard due to high-value inventory and easy overnight access.

Open lots, limited staffing, and expensive assets make these locations especially vulnerable after hours.

Car Dealerships Require Smarter Security

US Virtual Guard delivers intelligent protection for dealerships and parking areas. Our live guards monitor camera feeds in real time—spotting suspicious activity and deterring theft before it happens.

What sets us apart

Unlike traditional alarms, we combine AI technology with real human oversight, 24/7. Our team responds instantly to threats using voice-down systems or by alerting law enforcement. We work with your existing infrastructure for seamless coverage.

With US Virtual Guard, your lot stays secure, losses are reduced, and customer trust stays intact.

****See our website for additional industries we serve***

Luxury Homes

Luxury Homes Are a Growing Target

In 2023, break-ins at high-end and seasonal homes rose by **over 30%**, especially in properties left unoccupied for long periods.

Criminals often bypass outdated alarm systems that only react after the damage is already done.

Luxury Homes Require Luxury Security

US Virtual Guard provides discreet, high-tech security tailored for luxury estates. Our live remote guards actively monitor your property to prevent intrusions before they occur.

What sets us apart

Unlike AI-only systems, our trained professionals watch your cameras live, 24/7. They verify threats in real time and respond instantly—whether you're home or thousands of miles away.

With US Virtual Guard, your home is never left unprotected—giving you the peace of mind your lifestyle deserves.

****See our website for additional industries we serve***

Cannabis

Cannabis Businesses Are a Growing Target

In 2023, cannabis-related businesses faced over **1000 reported break-ins**, with millions lost due to theft from both farms and dispensaries.

High-value products, strict regulations, and cash-heavy operations make them prime targets for organized crime.

Cannabis Businesses Require Smarter Security

US Virtual Guard delivers compliant, proactive protection for both grow operations and retail locations. Our live remote monitoring deters intrusions, safeguards inventory, and helps maintain regulatory compliance.

What sets us apart

Our trained guards monitor your cameras live, 24/7—responding instantly to suspicious behavior with voice deterrents or direct law enforcement alerts. We integrate with your existing systems and meet industry-specific security standards.

With US Virtual Guard, your facility stays compliant, your assets stay secure, and your business stays uninterrupted.

****See our website for additional industries we serve***

Retail Stores

Retail Stores Are a Growing Target

In 2023, U.S. retailers lost over **\$112 billion** to theft, with organized retail crime and shoplifting rising sharply across all store types.

Busy hours, blind spots, and limited staffing make many stores easy targets—even during the day.

Retail Stores Require Smarter Security

US Virtual Guard delivers live, tech-driven surveillance that helps prevent loss before it happens. From entrances to stockrooms, we monitor activity in real time to deter theft and protect staff.

What sets us apart

Our trained guards watch your cameras live, not after the fact. We respond instantly to suspicious behavior, using voice-down systems or contacting on-site staff or authorities. Integration is seamless with your existing setup.

With US Virtual Guard, your store stays secure, your team feels protected, and your bottom line stays strong.

Schools

Schools Are a Growing Target

In 2023, there were over **1,300 security incidents** reported across U.S. K-12 schools, including trespassing, vandalism, and threats to student safety.

Budget limits and large campuses often leave blind spots in traditional security approaches.

Schools Require Smarter Security

US Virtual Guard offers proactive, affordable surveillance tailored for educational environments. Our live remote monitoring helps detect and deter threats before they impact students, staff, or property.

What sets us apart

Our trained professionals monitor feeds in real time. We respond instantly to suspicious activity using voice warnings or by alerting school personnel or authorities. We work with your existing systems without disrupting operations.

With US Virtual Guard, schools stay safer, response times improve, and learning environments stay protected.

Houses of Worship

An Escalating Threat to Houses of Worship and Community Centers. In recent years, attacks on religious institutions across the United States have surged at an alarming rate:

- **2020: 55 incidents**
- **2021: 96 incidents**
- **2022: 195 incidents**
- **2023: 1,027 incidents**

And unfortunately, the numbers continue to grow.

From vandalism and bomb threats to arson and physical attacks, no faith community has been spared. Synagogues, churches, mosques, and temples are being targeted simply for what they represent.

Most houses of worship are nonprofit community institutions, and hiring full-time on-site guards isn't always financially feasible. That's why US Virtual Guard developed a smarter, more affordable solution: live human remote guards backed by cutting-edge technology.

Many of these facilities sit empty for long periods during the week—leaving them vulnerable to break-ins, vandalism, and other forms of damage. Our trained remote guards monitor these locations during off-hours, deterring threats before they escalate.

***Prevent danger before it strikes.
Protect what matters most—with US Virtual Guard.***

Construction Sites

Construction Sites Are a Growing Target

In 2023, theft from construction sites cost U.S. companies over **\$1 billion**, with tools, equipment, and materials disappearing after hours.

Most sites lack full-time security, making them easy targets for opportunistic criminals and trespassers.

Construction Sites Require Smarter Security

US Virtual Guard offers proactive protection for job sites of all sizes. Our remote live monitoring detects intrusions in real time—stopping theft and vandalism before damage is done.

What sets us apart

Our trained guards watch your cameras 24/7, responding immediately to suspicious activity with voice deterrents or alerts. We integrate seamlessly with your setup—no need for costly physical guards.

With US Virtual Guard, your site stays protected, your timelines stay on track, and your bottom line stays safe.

How It Works: Responding to Emergencies

At US Virtual Guard, our remote guards are trained to act fast, smart, and in sync with your security protocols. Here's how our emergency response unfolds:

► **Suspicious Activity Detected**

A trained remote guard actively monitoring your site spots unusual behavior and immediately pins the camera feed to focus on the activity.

Threat Assessment ◀

The guard quickly assesses the situation to determine if there is a real threat. If confirmed, the case is escalated.

▶ ***Escalation to Shift Manager***

The incident is handed over to a on-site shift manager who is trained specifically in emergency management and de-escalation.

Immediate Deterrence ◀

When equipped with the USVG Horn Alert System (Highly recommended), our shift manager issues live verbal warnings, making it clear to intruders that they're being watched and that law enforcement is en route. In over 90% of cases, this immediate response causes intruders to flee before any damage occurs.

▶ ***Contacting Authorities & Stakeholders***

The shift manager simultaneously contacts emergency responders, the client, or designated contacts—following each client's specific protocols and custom-tailored escalation plan.

What Makes USVG Different

Security isn't just what we do—it's how we do it.

Proprietary Software: Shomer

Shomer is a smarter way to watch live video feeds—engineered and developed by USVG, designed for maximum effectiveness.

Elite Leadership & Training

Our command center is staffed by former special forces and seasoned security professionals who oversee continuous training for our in-house remote guards—ensuring alertness, skill, and unmatched readiness.

All Under One Roof

Unlike fragmented remote or outsourced models, our entire team—from live remote guards to emergency responders—operates under one roof, fostering seamless coordination and real-time communication.

Dedicated Emergency Handlers

We separate camera surveillance from incident response. If an emergency arises, a dedicated responder manages the situation—while the remote guard remains focused on continuous observation.

Built-In Redundancy

We've designed for resilience: multiple high-speed internet connections, backup generators, and even a fully operational secondary command center. Your protection never stops—even when the unexpected happens.

100% In-House Team

To ensure our staff operates at the highest level, every live guard and technician is a USVG employee; No outsourcing, No outside staffing. All of our employees are rigorously vetted with background checks, polygraph tests and performance evaluations.

Operational Discipline

All staff undergo regular training by in-house security experts to uphold strict protocols and procedures. Employees follow a disciplined schedule to support seamless shift handovers—making sure every screen and every moment is monitored with the utmost diligence.

Military-Inspired Command Center Design

The USVG environment is built for mission-critical focus. Every screen layout, and action is engineered to keep guards actively engaged and mentally sharp.

Strict Access Control

Our Command center is a distraction free zone to ensure full attention of our live guards. We operate with high standards such as; no personal mobile devices allowed in the Command Center and precision shift changes; Keeping the focus on the screens to maintain uninterrupted vigilance.

Creating Standard Operating Procedures

Once we have accumulated all of the information from the customer, our security professionals create specific Standard Operating Procedures (SOP's). The custom SOP's are then integrated into the daily shift training so every operator is aware of exactly what to watch for and who to communicate with for each site.

USVG is re-imagining what remote guarding can be—with precision, control, and trust at the center of everything we do!
