

What Does Parity Do?

Parity combines control algorithms, real-time monitoring, proactive technical support, and savings verification to slash energy usage, cut CO2 emissions and reduce on-site staff workloads in multifamily buildings. **Guaranteed, or we cut you a check.**

How Does Our Control Optimization Work?

- 1 Local controls are connected to the Parity cloud where operational and equipment data are streamed
- 2 Parity's algorithms and people use real-time and historical data trends to develop optimized control set points
- 3 Optimized HVAC control adjustments are streamed to the building in real-time
