

Introducing aquaHALT™

# protection starts with detection.

Protect your home, protect your property, protect your investment.

Patent US 10,895,068 B1

# Finally, a battery operated leak detection system that actually **STOPS WATER FLOW!**

**WHETHER YOU'RE A HOME OWNER, PROPERTY MANAGER OR DEVELOPER,  
PROTECTING YOUR INVESTMENT IS ALWAYS TOP PRIORITY.**

## **Easy-to-Install**

Installation is easy,  
so no need to  
hire a plumber.

## **Battery Operated**

Runs on AA batteries,  
so no need to  
hire an electrician.

## **Insurance Benefits**

aquaHALT can reduce your risk  
of water leaks, property damage,  
and potentially reduce your  
insurance premiums.

## **Auto Shut-Off**

The most innovative,  
reliable and effective  
way to detect  
water leaks.

# it's a total turn off.

The most innovative, reliable and effective way to detect water leaks and shut water off immediately.

Homeowners, Landlords & Property Managers all love aquaHALT.

“While consulting for our real estate clients and developers we have found that the introduction of the aquaHALT device to be a no-brainer decision factor in both upfront planning and retrofit upgrade activities. aquaHALT is truly a cost-effective device with proven flood and damage mitigation control.”

MICHAEL BATTISTELLI • PRIVATE ENGINEERING CONSULTANT

aquaHALT was designed to be affordable and effective in protecting your property and your investment.

**WHILE OTHER LEAK DETECTION SYSTEMS OPERATE**

Using 120 volts

Only on main water lines behind the walls

Only by sending an alert of the presence of water

By having a licensed plumber to install them

**aquaHALT WAS DESIGNED NOT TO BE COMPLICATED**

It operates on 2 AA batteries

It can be installed virtually anywhere within a home or facility

It actually turns the water source off by not interrupting the rest of your home or facility

Installation is convenient, no plumber or electrician is needed

**aquaHALT CAN HALT SO MUCH MORE THAN WATER!**

Halt property vulnerability

Halt sleepless nights

Halt higher insurance premiums

Halt the worst case scenario

Halt damage to floors, subfloors and dry wall

Halt insurance claim headaches

Halt mold issues

# protection starts with detection.

Smoke alarms are credited for saving homeowners and insurance companies billions of dollars in property damages.

Yet, there is another hazard lurking that often goes unaddressed until the damage is done, **WATER!**

Homes, condominiums, apartment buildings, hotels, office buildings, and college dorms are all susceptible and vulnerable to the catastrophic repercussions of water damage.

---

Plumbing issues such as overflowing toilets, leaking toilet tanks, cracked hoses, damaged fill valves, leaking valves, leaking pipes, overflowing sinks, and more can lead to common, and often devastating consequences.

Leaks can be an incredible headache and inconvenience for the homeowner, and/or property manager. Once a leak is visible, or a flood occurs, the damage can be disastrous and expensive. Flooring and subflooring often need to be replaced, along with drywall and insulation, in order to prevent mold from forming.

Personal belongings and relocation costs while work is taking place is not always covered during water leaks. All these factors do not include the lengthy and time-consuming process of dealing with the insurance company for the claim.

**BUT WHAT IF THAT LEAK OR OVERFLOWED TOILET COULD BE MASSIVELY MINIMIZED?**

**AND WHAT IF THAT CATASTROPHIC FLOOD CAN BE PREVENTED ALL TOGETHER?**

Now it can. aquaHALT is the only battery operated, easy-install water detection system that not only detects water leakage, but can also shut off the source of the water flow, preventing devastating water damage.

Like a smoke detector, aquaHALT is a small, easily installed (DIY), battery operated unit that detects water, and will automatically signal an alert while simultaneously shutting off the water source to prevent property damage.

Install aquaHALT today - for peace of mind tomorrow.
