

W&M is a full-service fire protection contractor who designs, installs, inspects, and services fire protection systems. After a system is designed, our team of qualified technicians will install in accordance with NFPA standards. We provide initial testing as well as ongoing inspections as often as required by NFPA standards and or local codes.

24/7 Emergency Response Service

Our professional staff of mechanics have fire sprinkler certifications and are prepared to resolve even the most unforeseen of emergency situations. Whether it is a leak, a freeze-up, a fire pump out of service, or a backflow device malfunction.

Fire Sprinkler Systems Service

Wet System Sprinklers; Dry System Fire Sprinklers; Deluge Systems; Pre-action Systems Sprinklers; Mist Sprinkler Systems; Early Suppression; Fast Response Systems; In-Rack Sprinkler Systems.

Fire Alarm & Detection Service

After install of the fire alarm system, we provide regular inspections and testing in accordance with NFPA standards to keep devices working properly. We perform battery replacement, alarm repairs, and updates or improvements as needed. We also provide fire alarm monitoring to make sure that your facility is being protected 24 hours a day, 7 days a week.

Special Hazards Fire Suppression

Clean Agent products are preferred for use in telecommunications and data processing centers, switch gear rooms, cell sites and other water sensitive applications. Many are U.S. Green Building Council/LEED recognized. W&M installs numerous high expansion foam systems to protect military and private aircraft hangars throughout the northeast. We also offer protection solutions for flammable liquid or chemical storage and processing.
